Section 1:

Screen shots of SQL Queries with output

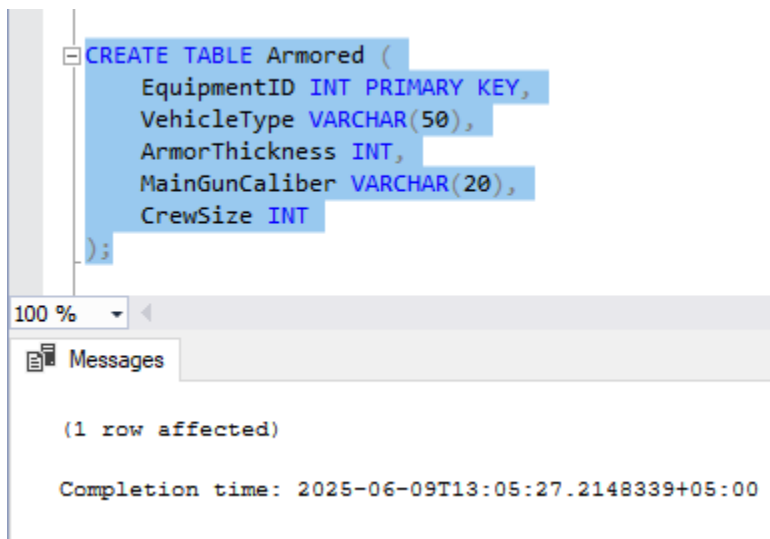

The screenshot shows a SQL Server Enterprise Manager window titled "DBS-Project.sql -...P-7DH83US\HP (52)". The query editor displays the following SQL statement:

```
CREATE TABLE Infantry (  
    EquipmentID INT PRIMARY KEY,  
    WeaponType VARCHAR(50),  
    Caliber VARCHAR(20),  
    ServiceYear INT,  
    UnitAssignment VARCHAR(50)  
);
```

The query is executed, and the Messages pane shows the following output:

```
(1 row affected)  
  
Completion time: 2025-06-09T13:04:34.9471847+05:00
```

The screenshot shows a SQL Server Enterprise Manager window titled "DBS-Project.sql -...P-7DH83US\HP (52)". The query editor displays the following SQL statement:

```
CREATE TABLE Armored (  
    EquipmentID INT PRIMARY KEY,  
    VehicleType VARCHAR(50),  
    ArmorThickness INT,  
    MainGunCaliber VARCHAR(20),  
    CrewSize INT  
);
```

The query is executed, and the Messages pane shows the following output:

```
(1 row affected)  
  
Completion time: 2025-06-09T13:05:27.2148339+05:00
```

```
CREATE TABLE Artillery (  
    EquipmentID INT PRIMARY KEY,  
    Range INT,  
    Caliber VARCHAR(20),  
    MobilityType VARCHAR(30) CHECK (MobilityType IN ('Towed', 'Self-Propelled'))  
);
```

Section 2:

Normalization

Normalization Process of Military Inventory System

1. Un-normalized Form (UNF)

The unnormalized table (UNF) combines all data from 12 military equipment categories into a single table. It contains attributes related to the Army, Air Force, and Navy equipment in one place, leading to data redundancy and null values for unrelated categories. The unnormalized table contains attributes related to multiple entities (e.g., Army, Navy, Air Force) in a single table. It has repeating groups and is not atomic.

AllMilitaryEquipment_UNF Table Attributes

- EquipmentID
- EquipmentType
- Branch
- ModelName
- Manufacturer
- CommissionDate
- Status
- CurrentLocation
- LastInspectionDate
- WeaponType
- Caliber
- ServiceYear
- UnitAssignment
- VehicleType_Army
- ArmorThickness
- MainGunCaliber
- CrewSize_Army
- ArtilleryRange
- MobilityType
- Capacity
- Purpose

- MaxSpeed
- AircraftRange
- Armament
- RotorDiameter
- CombatRadius
- ThrustToWeightRatio
- RadarRange
- Endurance
- CrewSize_Air
- PayloadCapacity
- CargoHoldDimensions
- Displacement
- AircraftCapacity
- PropulsionType
- MissileSystems
- ASWCapabilities
- NavalRange
- PrimaryWeapon
- CrewSize_Navy

Step 2: First Normal Form (1NF)

In 1NF, we remove repeating groups and ensure atomicity. Each table must have a primary key and no multivalued attributes. We split the table based on branch-specific details.

Tables and Attributes in 1NF

- Equipment (PK: EquipmentID)
EquipmentType, Branch, ModelName, Manufacturer, CommissionDate, Status, CurrentLocation, LastInspectionDate
- InfantryWeapons (PK, FK: EquipmentID)
WeaponType, Caliber, ServiceYear, UnitAssignment
- ArmoredVehicles (PK, FK: EquipmentID)
VehicleType, ArmorThickness, MainGunCaliber, CrewSize
- ArtillerySystems (PK, FK: EquipmentID)
Range, Caliber, MobilityType
- SupportVehicles (PK, FK: EquipmentID)
VehicleType, Capacity, Purpose
- AttackHelicopters (PK, FK: EquipmentID)
MaxSpeed, Range, Armament, RotorDiameter

- FighterJets (PK, FK: EquipmentID)
MaxSpeed, CombatRadius, Armament, ThrustToWeightRatio
- AWACS (PK, FK: EquipmentID)
RadarRange, Endurance, CrewSize
- CargoAircraft (PK, FK: EquipmentID)
PayloadCapacity, Range, CargoHoldDimensions
- AircraftCarriers (PK, FK: EquipmentID)
Displacement, AircraftCapacity, PropulsionType, CrewSize
- Cruisers (PK, FK: EquipmentID)
Displacement, MissileSystems, TopSpeed
- Frigates (PK, FK: EquipmentID)
Displacement, ASWCapabilities, Range
- Corvettes (PK, FK: EquipmentID)
Displacement, PrimaryWeapon, CrewSize

Step 3: Second Normal Form (2NF)

All tables from 1NF are already in 2NF because they have a single-column primary key and no partial dependencies.

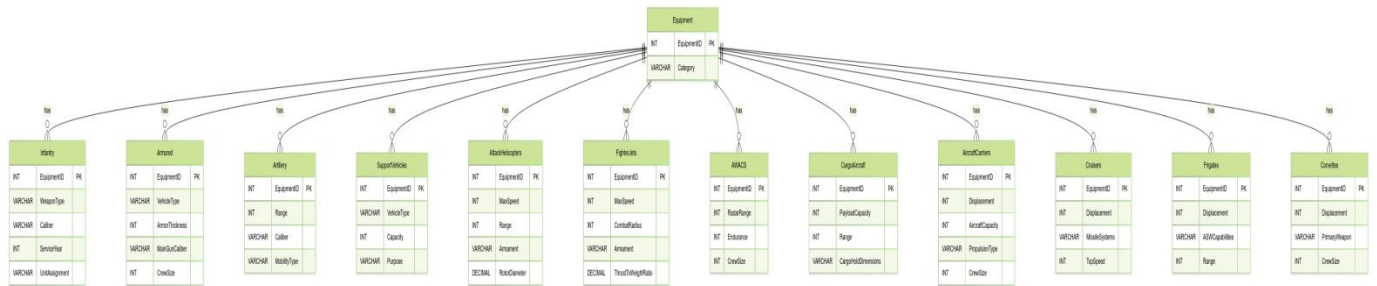

Step 4: Third Normal Form (3NF)

We remove transitive dependencies by creating reference tables for Manufacturer, EquipmentType, and Branch.

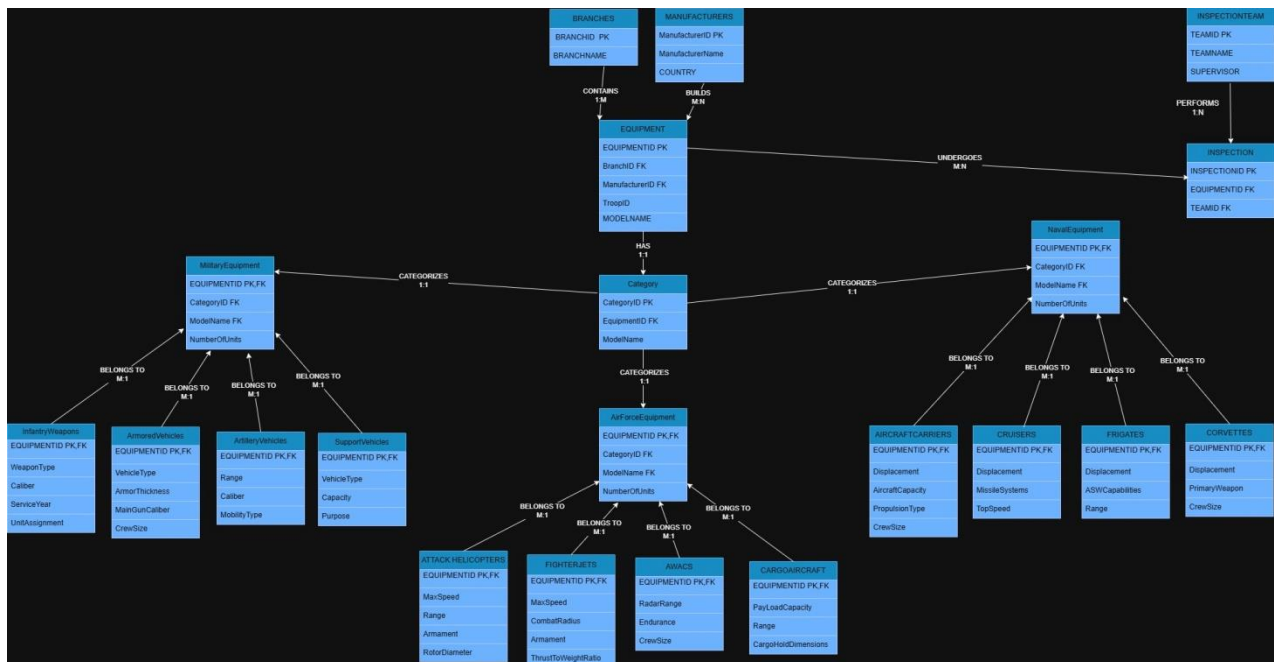

Normalized Tables in 3NF

- Branches (PK: BranchID)
BranchName
- EquipmentTypes (PK: TypeID, FK: BranchID)
TypeName
- Manufacturers (PK: ManufacturerID)
ManufacturerName, Country
- Equipment (PK: EquipmentID, FK: TypeID, FK: ManufacturerID)
ModelName, CommissionDate, Status, CurrentLocation, LastInspectionDate

Section 3: Simple ERD

Section 4: Enhanced ERD

Section 5:

Updated windows form having joins

The screenshot shows a Windows application window titled 'Form1'. Inside the window, there is a central area with a light gray background. At the top of this area is a blue rectangular button labeled 'Military Inventory System'. Below this button, there is a grid of 12 smaller gray buttons arranged in three columns and four rows. The buttons are labeled as follows:

Column 1	Column 2	Column 3
Infantry Weapons	Attack Helicopters	Aircraft Carriers
Armored Vehicles	Fighter Jets	Cruisers
Artillery System	AWACS	Frigates
Support Vehicles	Cargo Aircraft	Corvettes

Below the grid of buttons, there is a single gray button labeled 'Join Tables' centered horizontally.

This main form contains buttons by clicking on any button user can go on corresponding selected table

Separate forms for each table are as follow:

All operations ADD, delete, Joins buttons are properly working

Working of Joins

By clicking on button “Join Table” user have new form in which user can join any two tables of his choice
